CHAPTER V

CONCLUSIONS AND SUGGESTIONS

5.1 Conclusions

After the researcher conducted research and analyzed data using the selected Questioner to the students in class XI MIPA 3 Senior High School 2 Muaro Jambi. With research that focuses on students' problems on Reading Comprehension, in general, it can be concluded that:

1. After calculating based on the data that has been obtained, strongly agree 27%, agree 59%, doubtful 11%, disagree 3%, strongly disagree 0%. It needs to be underlined once again that reading comprehension in the form of a questionnaire was made based on the research results of researchers by analyzing the language structure of reading comprehension to assess whether it is good or not. 28 students of Class XI IPA 3 at SMAN 2 Muaro Jambi who were studied by researchers. Consequently, their ability to understand their reading remains visible and influential because the participants are still at a reasonable level. On the other hand, the researcher o nly determined that 28 students of class XI IPA 3 were very good at reading comprehension.
2. Based on the results of the questionnaire distribution test, there were 28 samples with 15 students choosing agree, 5 students choosing strongly agree, the remaining 3 choosing doubtful and the rest they chose disagree. It is also known that not all students are classified as choosing answers

that do not agree and strongly disagree. Class XI IPA 3 students chose the answer agree 37% and 2% of them they chose disagree.

3. Respondents must be able to understand and explore concepts in order to create content based on a general framework. The class average for the results of the reading comprehension test in the form of a questionnaire was 89.6. The average student test score for each reading comprehension was 89.6% for the total, 16% for Strongly agree, 34% for Agree, 7% for doubtful and 2% for disagree. As a result, students prefer to agree compared to Strongly Agree and Disagree. Most students can understand reading comprehension with the questionnaire test well based on the questionnaire that was distributed, but some others need to improve their reading comprehension to be improved in the future.

5.2 Suggestions

Based on the conclusions above, the researcher gave the following

suggestions:

1. Teachers The results of this study are a reflection of the students' abilities, in which the teaching teachers should pay more attention to grammatical aspects and ensure that students understand them with various methods that can be used by teachers. The teacher plays a big role in ensuring students' understanding of a learning topic.

2. Students

For students, the results obtained in this study can be used as a reflection to correct themselves and understand each other's inabilities. The researcher hopes that the students will be able to recognize their respective incompetence and be brave enough to find a way out of the problem
